Luke Radomski

OWN-WAY.NET · TECHNOLOGY CONSULTING FOR STARTUPS

I ran technology and security at a fast-growing e-commerce platform, and before that built and led large systems at JPMorgan Chase and Thomson Reuters. Now I work with startups that need that experience for a few weeks, or a few days a week, before they hire a CTO.

ENGAGEMENTS

START HERE

Technical review — 1–2 weeks, fixed price

I go through your code, cloud, security and delivery process, then give you a written plan in order of priority.

BUILD AND FIX

First product build — scoped per product

For founders without an engineering team: a first version ready for real users, including cloud and payments, that you own outright.

Cloud setup — 2–4 weeks

Separate test and production environments, automated deployments, access control and monitoring, all defined in code.

AI coding setup — 2–4 weeks

Your repositories, reviews and CI set up so engineers can work with AI coding agents safely, plus hands-on training.

Reliability — starts with a 1-week diagnosis

For platforms that fail under load: find what breaks, redesign it, and load-test before your next launch or peak.

SECURITY AND COMPLIANCE (CLOUD AND ENGINEERING)

SOC 2 readiness — scoped after a gap assessment

The technical controls and evidence your auditor will ask for, built into your cloud and development process.

PCI DSS for merchants — scoped after a gap assessment

Keep card data out of your systems, confirm which assessment applies to you, and put the technical controls in place.

LEADERSHIP AND ARCHITECTURE

Fractional CTO — 1–2 days a week

Roadmap, architecture, hiring and vendor decisions, and clear reporting to founders and the board.

Architecture and engineering — by the day or by project

Senior depth on a specific problem: architecture design or review, hands-on development on the hardest parts, and production issues the team can't crack.

How it works. A free 30-minute call, then a fixed-scope statement of work or a day rate. Part-time up to full-time, remote, based in the New York area. Everything I build stays in your accounts, documented.

SELECTED WORK

Scale

Led technology for the Chase Digital Assistant, from proof of concept to the full Chase mobile app audience.

Platforms

Ran the analytics platform behind Thomson Reuters Eikon, which product teams on three continents built on.

Compliance

Designed security and compliance programs that passed PCI DSS and SOC 2 audits on the first attempt.

Consolidation

Merged legacy platforms into one, with no changes required from clients.

Reliability

Took an outage-prone e-commerce platform to its first incident-free Black Friday, at record volume.

AI engineering

Moved a whole engineering organization to AI-assisted, spec-driven development.
